

Three Steps to Register Your DSC.

Step1: Install your token Device Driver in your Computer.

Step2: Install/Update Latest Java version in your Computer.

Step3: Register your DSC in SPARROW.

Step1: Install your Token Device in your Computer.

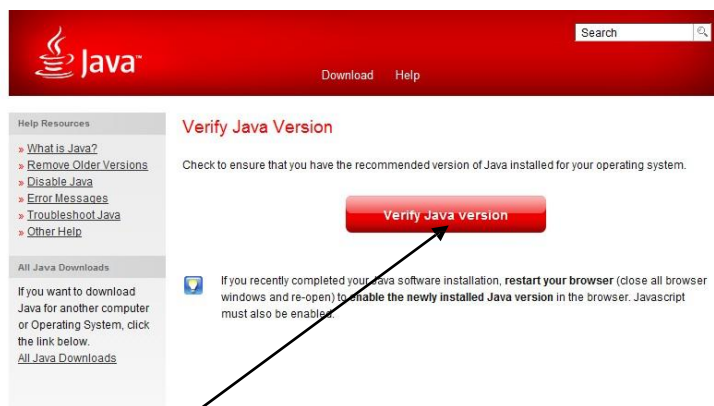

1. Plug the device in your Computer USB Drive. Click on Run button. This will install DSC Driver in your computer.

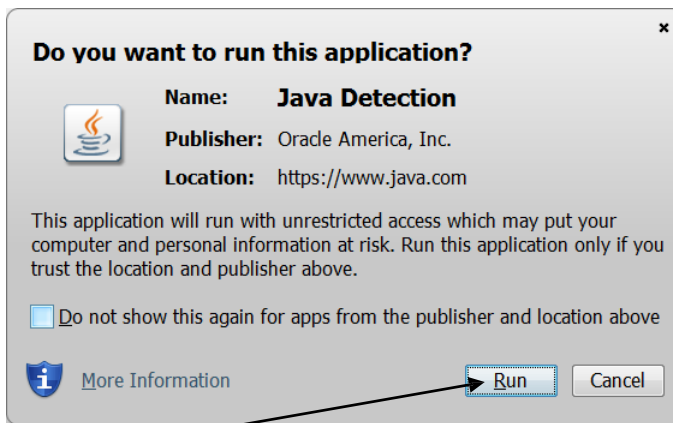

Step2: Update/Install latest Version of Java.

1. Open Internet Explorer and Type www.java.com, the following screen will be appeared

2. Click here the link “Do I have Java”. The following screen will be appeared

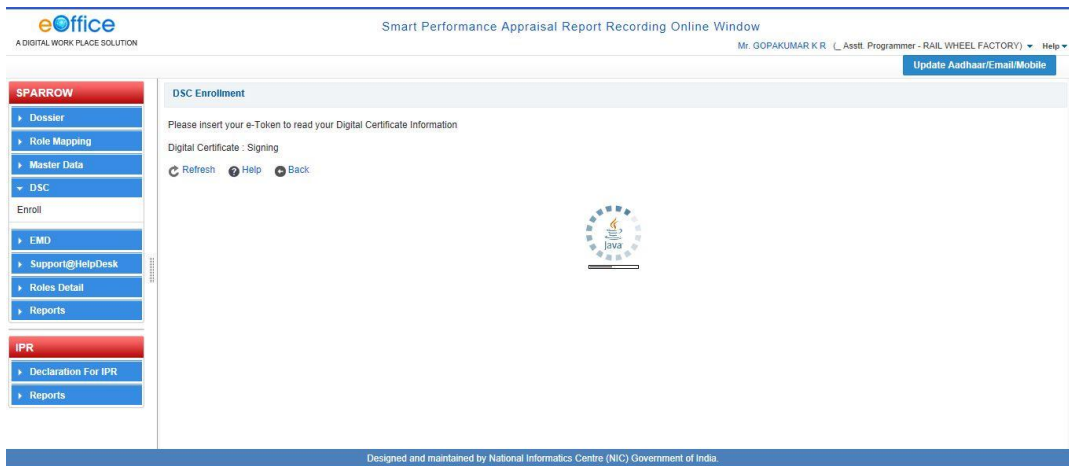

3. Click on Run
4. This will update to the latest version of Java.

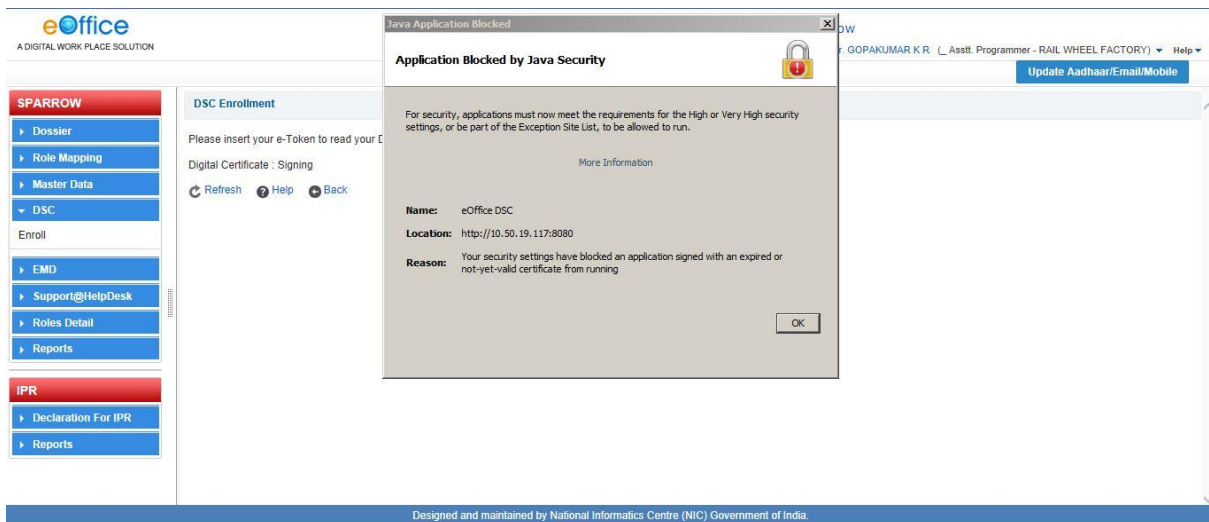

Step3: Register DSC in SPARROW.

1. Login to SPARROW.
2. Click on DSC option in the left panel
3. Click on Enroll. Following screen will appear

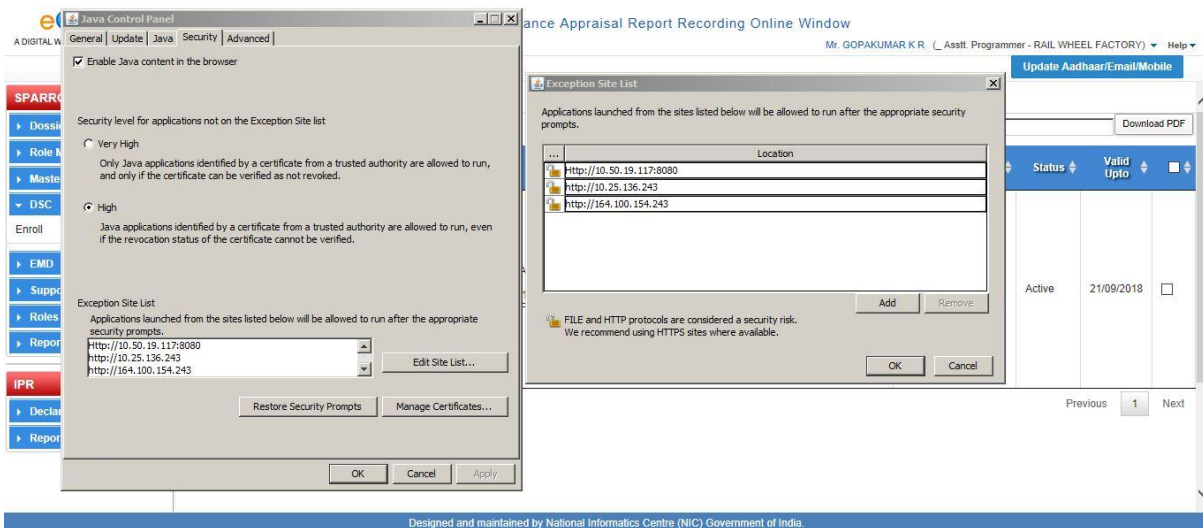

4. Click on DSC Registration button, the following screen will appear.

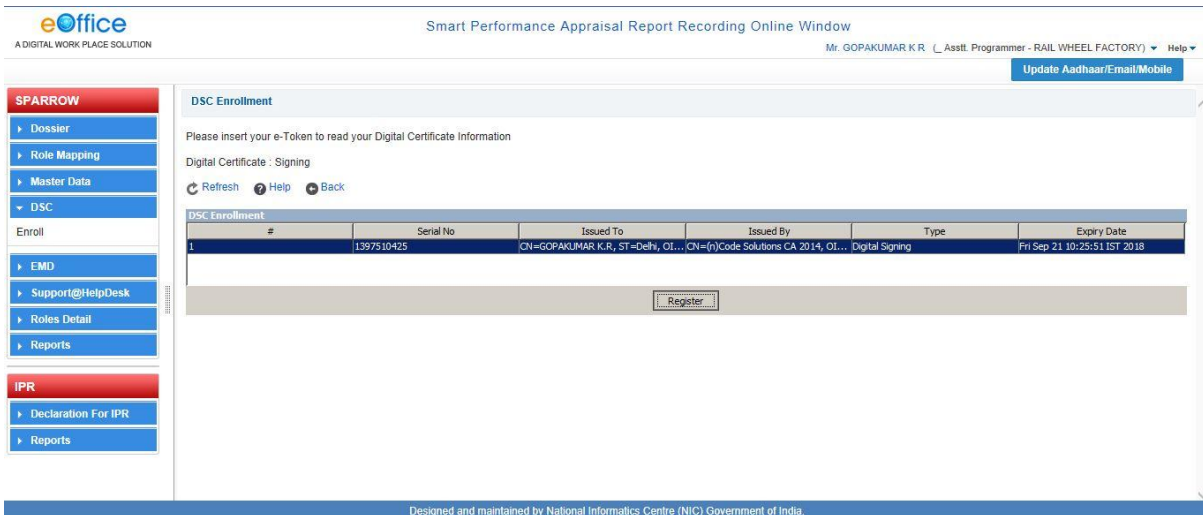

5. The following error message may appear.

- In case the above error message appears, open Java configuration setup by Start -> All Programs -> Java -> Configure Java and add the URL of the SPARROW site (Http://10.50.19.117:8080) to the exception site list under the security tab as shown below.

- After successfully adding the URL to Java exception list, repeat steps 2 to 4. The following screen will appear after reading the DSC details from your e-token.

- Select the DSC details and click on the Register button. The DSC will be registered in the SPARROW application and a message box showing "The DSC has been registered successfully" will appear.
